**DETAILED ACTION**

1. Applicant's election without traverse of Group II, Claims 21 and 22, in Paper No. 9, filed 6/09/03, is acknowledged.

2. Claims 1-14 have been canceled.  
Claims 21 and 22 are pending and being acted upon.

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

(e) the invention was described in-

(1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effect under this subsection of a national application published under section 122(b) only if the international application designating the United States was published under Article 21(2)(a) of such treaty in the English language; or

(2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that a patent shall not be deemed filed in the United States for the purposes of this subsection based on the filing of an international application filed under the treaty defined in section 351(a).

4. Claims 21 and 22 are rejected under 35 U.S.C. 102(e) as being clearly anticipated by U.S. Patent No. 5,980,954 (IDS).

The '954 patent teaches a population of mammalian T cells (peripheral blood mononuclear cells) essentially free of stem cells, having been subjected *in vitro* to oxidative stress (see particularly column 4, line 65 - column 5, line 4).

The reference clearly anticipates the claimed invention.

5. Claims 21 and 22 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by WO 98/07436 (IDS).

WO 98/07436 teaches a population of mammalian T cells (peripheral blood mononuclear cells) essentially free of stem cells, having been subjected *in vitro* to oxidative stress (see particularly page 8, second paragraph).

The reference clearly anticipates the claimed invention.

6. No claim is allowed.

7. EPO 0339927A on the IDS filed 11/12/02, was not submitted, instead, Applicant submitted EPO 0339924A. Neither was the Sheng-Tanner et al. abstract submitted. Instead, Applicant submitted an abstract of Spaner et al., "Prevention of Major MHC Disparate GVHD by the Use of Multiple Physicochemical Stressors" of unknown origin.
